

Publications List (complete)

Ana G. Elias

Publications in Journals:

1. Termodinámica del Ordenamiento del Oxígeno en el YBaCuO: Método de la Cadena Lineal, A.G. Elias, S. Perez, A.M. Sauvage y C. Hoffmann, *Información Tecnológica*, 6, 73-77, 1995.
2. Probable Values of Rise and Fall Off Time of Solar Cycles 23, 24 and 25, Nieves O. de Adler and Ana G. Elias, *Annali di Geofisica*, 39, 533-538, 1996.
3. Solar Cycle Length Variation: its relation with ionospheric parameters, N.O. de Adler, A.G. Elias and J.R. Manzano, *Journal of Atmospheric and Terrestrial Physics*, 59, 159-162, 1997.
4. Association between Ionospheric Maximum Electron Density and Lower Stratospheric Temperature, N.O. de Adler, A.G. Elias and J.R. Manzano, *Journal of Geophysical Research*, 102, 25973-25976, 1997.
5. Forecast of Solar Maximum and Minimum Dates for Solar Cycles 23 to 29, A.G. Elias and N.O. de Adler, *Annali di Geofisica*, 41, 27-32, 1998.
6. Long-term changes in UV and EUV solar radiation, N.O. de Adler, A.G. Elias and T. Heredia, *Geofisica Internacional*, 39, 93-95, 2000.
7. The 1940's temperature decrease in locations of Argentina, T. Heredia, N.O. de Adler and A.G. Elias, *Proceedings of the First Solar and Space Weather Euroconference "The Solar Cycle and Terrestrial Climate"*, ESA SP-463, 493-495, 2000.
8. Solar Variability associated to ionospheric, stratospheric and tropospheric parameters, N.O. de Adler and A.G. Elias, *Proceedings of the First Solar and Space Weather Euroconference "The Solar Cycle and Terrestrial Climate"*, ESA SP-463, 509-512, 2000.
9. Long term trends of the ionospheric F2 layer peak height at a southern low latitude station, N.O. de Adler, A.G. Elias and T. Heredia, *Physics and Chemistry of the Earth*, 27, 613-615, 2002.
10. A search for an association between the equatorial stratospheric QBO and solar UV irradiance, A.G. Elias and M. Zossi de Artigas, *Geophysical Research Letters*, 30, 1841, doi:10.1029/2003GL017771, 2003.
11. The Solar Cycle in the Temperature of the Tropical Stratosphere, N. Ortiz de Adler and A.G. Elias, *Geofisica Internacional*, 43, 5-9, 2004.
12. Diurnal variation of NmF2 associated with the ExB drift in the equator during solar maximum conditions, T. Heredia and A.G. Elias, *Geofisica Internacional*, 43, 119-124, 2004.
13. Ionospheric effects of volcanic eruptions, A. Cosio de Ragone, A. Fillipi de Manzano, A.G. Elias and M. Zossi de Artigas, *Geofisica Internacional*, 43, 187-192, 2004.
14. Ionospheric response to the equatorial stratospheric wind, M. Zosi de Artigas, N.O. de Adler and A.G. Elias, *Geofisica Internacional*, 43, 199-203, 2004.
15. The equatorial stratospheric QBO and geomagnetic activity, M. Zossi de Artigas and A.G. Elias, *Journal of Atmospheric and Solar-Terrestrial Physics*, 67, 1280-1286, 2005.
16. foF2 long-term trends at the southern crest of the equatorial anomaly, A.G. Elias and N. Ortiz de Adler, *Physics and Chemistry of the Earth*, 31, 63-67, 2006.
17. Discrete wavelet analysis to assess long-term trends in geomagnetic activity, M. Zossi de Artigas, A.G. Elias and P. Fernandez de Campra, *Physics and Chemistry of the Earth*, 31, 77-80, 2006.
18. Long-term trends in foF2: a comparison of various methods, J. Lastovicka, A.V. Mikhailov, T. Ulich, J. Bremer, A.G. Elias, N. Ortiz de Adler, V. Jara, R. Abarca del Rio, A.J. Foppiano, E.

- Ovalle, and A.D. Danilov, *Journal of Atmospheric and Solar-Terrestrial Physics*, 68, 1854-1870, 2006.
19. Earth magnetic field and geomagnetic activity effects on long term trends in the F2 layer at mid-high latitudes, A.G. Elias and N. Ortiz de Adler, *Journal of Atmospheric and Solar-Terrestrial Physics*, 68, 1871-1878, 2006.
 20. The quasi-decadal modulation of running correlations involving the QBO, A.G. Elias and M. Zossi de Artigas, *Journal of Atmospheric and Solar-Terrestrial Physics*, 68, 1980-1986, 2006.
 21. Determination of T and R Coefficients of the Polarized HF Wave Travelling Vertically in Ionospheric Plasma, I. Unal, A. Yesil and A.G. Elias, *Balkan Physics Letters*, 15, 794–799, 2007.
 22. Reflection and transmission in the ionosphere considering collisions in a first approximation, A. Yesil, M. Aydogdu and A.G. Elias, *Progress In Electromagnetics Research Letters*, 1, 93–99, 2008.
 23. Strong geomagnetic disturbances and induced currents on earth surface, A.G. Elias and V.M. Silbergleit, *Progress In Electromagnetics Research Letters*, 1, 139–148, 2008.
 24. Latitudinal variation of foF2 hysteresis of solar cycles 20, 21 and 22, N. Ortiz de Adler and A.G. Elias, *Annales Geophysicae*, 26, 1269-1273, 2008.
 25. Trends in the F2 ionospheric layer due to long-term variations in the Earth's magnetic field, A.G. Elias, *Journal of Atmospheric and Solar-Terrestrial Physics*, 71, 1602-1609, 2009.
 26. Lower and middle atmosphere and ozone layer responses to solar variation, A.G. Elias, *Proceedings of the International Astronomical Union*, 5, Symposium S264, pp. 336 -342, doi:10.1017/S1743921309992882, 2010.
 27. Trends in the solar quiet geomagnetic field variation linked to the Earth's magnetic field secular variation and greenhouse gases increasing concentration, A.G. Elias, M. Zossi de Artigas and B.F. de Haro Barbas, *Journal of Geophysical Research*, 115, A08316, doi:10.1029/2009JA015136, 2010.
 28. Possible Sources of Long-Term Variations in the Mid-Latitude Ionosphere, A.G. Elias, *The Open Atmospheric Science Journal*, 5, 9-15, 2011.
 29. Long-term variation of the semiannual amplitude in the aa index, A.G. Elias, V.M. Silbergleit, A.L. Clua de Gonzalez, *Journal of Atmospheric and Solar-Terrestrial Physics*, 73, 1492-1499, 2011.
 30. A study on possible solar and geomagnetic effects on the precipitation over northwestern Argentina, T. Heredia and A.G. Elias, *Advances in Space Research*, 51, 1883–1892, 2013.
 31. Long-term trend of foF2 at a West African equatorial station linked to greenhouse gas increase and dip equator secular displacement, D.A. Gnabahou, A.G. Elias and F. Ouattara, *Journal of Geophysical Research*, Vol. 118, 3909–3913, doi:10.1002/jgra.50381, 2013.
 32. Long-term changes in solar quiet (Sq) geomagnetic variations related to Earth's magnetic field secular variation, B.F. de Haro Barbas, A.G. Elias, I. Cnossen, and M. Zossi de Artigas, *Journal of Geophysical Research*, 118, 3712–3718, doi:10.1002/jgra.50352, 2013
 33. Quasi-biennial oscillations in GPS VTEC measurements, L.I. Fernandez, A.M. Meza and A.G. Elias, *Advances in Space Research*, 54, 161–167, 2014.
 34. Filtering ionosphere parameters to detect trends linked to anthropogenic effects, A.G. Elias, *Earth, Planets and Space*, 66, 113, 2014.
 35. Effect of solar cycle 23 in foF2 trend estimation, A.G. Elias, B.F. de Haro Barbas, K. Shibasaki and J.R. Souza, *Earth, Planets and Space*, 66, 111, doi: 10.1186/1880-5981-66-111, 2014.

36. On the inclusion of data from solar cycle 19 to estimate F2 layer characteristic long term trends, B.F. de Haro Barbas and A.G. Elias, *Annals of Geophysics*, 58, A0441; doi:10.4401/ag-6676, 2015.
37. Ionospheric trends in Southern Hemisphere stations due to the increasing greenhouse gases concentration, J.V. Venchiarutti, B.F. de Haro Barbas and A.G. Elias, *Annals of Geophysics*, 58, A0332; doi:10.4401/ag-6707, 2015.
38. Precipitation over two Southern Hemisphere locations: Long-term variation linked to natural and anthropogenic forcings, T. Heredia and A.G. Elias, *Advances in Space Research*, 57, 1391-1401, 2016.
39. foF2 long-term trend linked to Earth's magnetic field secular variation at a station under the northern crest of the equatorial ionization anomaly, H.P. Thi Thu, C. Amory-Mazaudier, M. Le Huy, and A.G. Elias, *Journal of Geophysical Research*, 121, 719–726, doi:10.1002/2015JA021890, 2016.
40. Earth's magnetic field effect on MUF calculation and consequences for hmF2 trend estimates, A.G. Elias, B.S. Zossi, E. Yigit, Z. Saavedra, and B.F. de Haro Barbas, *Journal of Atmospheric and Solar-Terrestrial Physics*, 163, 114-119, 2017.
41. Recent Advances in Atmospheric, Solar-Terrestrial Physics and Space Weather From a North-South network of scientists [2006-2016], C. Amory-Mazaudier, R. Fleury, M. Petitdidier, S. Soula, F. Masson, GIRGEA team, J. Davila, P. Doherty, A.G. Elias, S. Gadimova, J. Makela, B. Nava, S. Radicella, J. Richardson, and A. Touzani, *Sun and Geosphere*, 12, 21-69, 2017.
42. Critical frequencies of the ionospheric F1 and F2 layers during the last four solar cycles: Sunspot group type dependencies, E. Yigit, A. Kilcik, A.G. Elias, B. Donmez, A. Ozcuc, V. Yurchshyn, and J.P. Rozelot, *Journal of Atmospheric and Solar-Terrestrial Physics*, 71, 157-163, 2018.
43. Ionospheric conductance spatial distribution during geomagnetic field reversals, B.S. Zossi, A.G. Elias, and M. Fagre, *Journal of Geophysical Research*, 123, 2379–2397, 2018.
44. On ionic contributions to Pedersen conductance, B.S. Zossi, M. Fagre, & A.G. Elias, *Journal of Geophysical Research* 123, 10,310–10,318, 2018.
45. Polar caps during geomagnetic polarity reversals, B.S. Zossi, M. Fagre, H. Amit, & A.G. Elias, *Geophysical Journal International*, 216, 1334–1343, 2019.
46. New Approach to OTH Main Parameters Determination, Z. Saavedra, J.N. Argota, M.A. Cabrera, & A.G. Elias, *Radioengineering*, 28, 643-650, 2019.
47. Tendencias en la precipitación en Tucumán bajo efecto del cambio climático, F.M. Bazzano, T. Heredia, A.G. Elías, C.M. Lamelas & J. Forciniti, *Meteorológica*, in press, 2019.
48. Searching for solar-like interannual to bidecadal effects on temperature and precipitation over a Southern Hemisphere location, T. Heredia, F.M. Bazzano, R.G. Cionco, W. Soon, F.D. Medina & A.G. Elias, *Journal of Atmospheric and Solar-Terrestrial Physics*, 193, 105094, 2019.
49. Ionospheric high frequency wave propagation using different IRI hmF2 and foF2 models, M. Fagre, B.S. Zossi, J. Chum, E. Yigit, & A.G. Elias, *Journal of Atmospheric and Solar-Terrestrial Physics*, 196, 105141, 2019.
50. Effect of the inclusion of solar cycle 24 in the calculation of foF2 long-term trend for two Japanese ionospheric stations, B.F. de Haro Barbas & A.G. Elias, *Pure and Applied Geophysics*, 177, 1071–1078, 2020.
51. High frequency sky wave propagation during geomagnetic field reversals, M. Fagre, B.S. Zossi, E. Yigit, H. Amit & A.G. Elias, *Studia Geophysica et Geodaetica*, 64, 130–142, 2020.
52. Simulated high frequency ray paths considering traveling ionospheric disturbances, M. Fagre, B.S. Zossi, J. Chum, & A.G. Elias, *SN Applied Sciences*, 2, 615, 2020.

Book Chapters:

1. Modelo para estimar la irradiancia solar en una atmósfera sin nubes, N. Ortiz de Adler, M.L. Molina y A.G. Elias, Investigaciones en Facultades de Ingeniería del NOA –Tomo I, ECO FACET UNT, Tucumán, Argentina, ISBN: 978-987-23950-0-1, Editores: N. Ortiz de Adler, A.G. Elias y T. Heredia, III-78 – III-82, 2007.
2. The Quasi-Biennial Oscillation in Time Series of Solar Activity Parameters, A.G. Elias and M. Zossi de Artigas, Solar Physics Research Trends, Nova Publishers, New York, ISBN: 1-60021-987-x, Editors: Pingzhi Wang, 3-13, 2008.
3. The 27-Day Periodicity in Geomagnetic Activity and Solar Wind Parameters over Solar Cycle 23, A.G. Elias, V.M. Silbergleit, A. Curcio and P.A. Larocca, Handbook on Solar Wind: Effects, Dynamics and Interactions, Nova Publishers, New York, ISBN: 978-1-60692-572-0, Editor: Hans E. Johannson, 2009.

Book Edition:

Investigaciones en Facultades de Ingeniería del NOA, Editorial: ECO FACET UNT, Tucumán, Argentina, ISBN: 978-987-23950-0-1, Editors: N. Ortiz de Adler, A.G. Elias & T. Heredia, 2007.
